DETAILED ACTION

Oath/Declaration

It does not identify the citizenship of each inventor. **Drawings**

1. Figure 1a and 1b should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-2 and 4-5 are indefinite because it is not clear to the examiner what the difference is between the first/second signal and the first/second calibration signal. It appears to the examiner from review of the specification and the drawings that the first and second sources only generate one signal, however in the claims they should each

Art Unit: 2816

be generating two signals (the first/second signal and the first/second calibration signal.

Are the first/second signals the same as the first/second calibration signal? If so, applicant should amend the claims to uniformly use one term or the other in order to avoid confusion. Correction or clarification is required.

Claim 3 is also rejected due to the limitations of the base claims and any intervening claims.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1-2 and 6-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Kurd (U.S. Patent No. 6,469,550).

In reference to claim 1 Kurd discloses in Figure 3 an electronic circuit comprising: a first source circuit (320, 322, 324) for generating a first signal (FBCLK A), wherein based on the examiner's understanding of the claim is the same as the first calibration signal, responsive to a calibration mode (which is seen as the enable mode); and a second source circuit (326, 328, 330) for generating a second signal (FBCLK B), wherein based on the examiner's understanding of the claim is the same as the second calibration signal, responsive to a calibration mode (which is seen as the enable mode);

Art Unit: 2816

a variable delay circuit (310, 312, 314) for detecting a delay between the first and second calibration signals (FBCLK A, FBCLK B) and applying a delay to the first signal responsive to the detected delay (see ABSTRACT). The same applies to claim 6.

In reference to claim 2, Kurd further discloses a fixed delay buffer (340) for applying a fixed delay to the second signal to compensate for delays attributable to the variable delay circuit (310, 312, 314), see specification column 3, lines 44-46. The same applies to claim 7.

Allowable Subject Matter

- 6. Claims 8-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. The following is a statement of reasons for the indication of allowable subject matter: Claims 8-10 would be allowable because the closest prior art of record fails to disclose a circuit as shown in Figure 4 wherein the method includes propagating the first calibration signal (A1) through a chain of fixed delay buffers (22); and detecting a transition of the first calibration signal (A1) between adjacent fixed delay buffers (22) in combination with the rest of the limitations of the base claims and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
